

## Welding Process Covered

(MAG) (135)  
(MIG) (131)  
(TIG) (141)

### Welding Process Covered

The company utilises MAG, MIG, and TIG welding processes to suit a wide range of materials, joint configurations, and performance requirements. Process selection is based on achieving optimum strength, durability, and production efficiency.

## Material Groups

Materials are selected in line with design and service conditions, with full traceability maintained from procurement through fabrication. Grouping in accordance with BS EN ISO guidance ensures compatibility between parent materials and consumables while supporting qualified welding procedures.

Understood — you want a short description for **each individual standard reference**, not the headings. Here are concise, professional lines you can paste next to each one.
